Johnson Controls

METASYS

Upgrade a Metasys server (ADS/X)
Help enhance productivity & cyber security

Make sure your Metasys software is up to date, and position your building for long-term success. Improve the user experience to boost productivity, ease integration with new technologies and components, and reduce the risk of security breaches. This promotion includes opportunities to trade up from the Site Management Portal to the Metasys user interface, with implementation options to fit your budget.

The power behind **your mission**

Modernize software, gain key benefits

Up-to-date Metasys software helps you save money, protect data and work smarter:

- The latest release enables direct controller/device connections to the server without hardware engines—a cost-effective option for future integrations and additions.

- The Metasys UI makes operation more intuitive and efficient, with photo-realistic graphics, navigation by space, and seamless access from smartphones, tablets and computers.

- Fault Detection & Fault Triage help even inexperienced staff prevent and fix issues, minimize energy waste and avoid comfort complaints.

- Alarm Manager helps quickly identify and prioritize alarms, for faster troubleshooting.

- Security enhancements align to the latest industry standards and regulations to help prevent unauthorized access.

- Key user account and system information in the award-winning Cyber Health Dashboard helps system administrators understand and address potential cyber security issues.
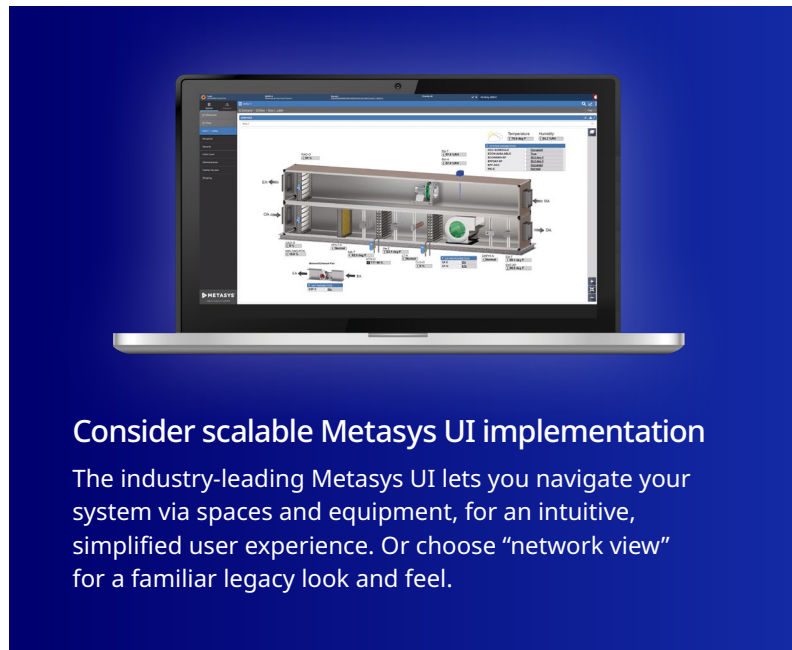

Starting on the path to modernization now promotes ongoing compatibility and scalability, extending Metasys longevity.

Consider scalable Metasys UI implementation

The industry-leading Metasys UI lets you navigate your system via spaces and equipment, for an intuitive, simplified user experience. Or choose "network view" for a familiar legacy look and feel.

Eliminate legacy risks

Move away from out-of-support Site Management Portal (SMP), reducing the risk of security breaches and operating disruptions. SMP was released in 2003 and entered end-of-support at Metasys 12.0. Step up to the Metasys UI and gain a host of efficiencies, as well as familiar SMP capabilities. We can help you develop a cost-effective migration plan.

Program details

Metasys software with MUI deployment incentives

- 40% off Metasys upgrade or migration software
- 40% off Metasys 1- or 3-year software subscriptions
- 40% off new Fault Detection software
- 40% off new Fault Triage software

A software subscription keeps your system up to date throughout the term of the subscription by providing the latest revisions of Metasys software.

Promotion valid through September 2025.

All materials must be ordered by September 15, 2025. Contact your Johnson Controls representative for more information.

Terms & conditions
1. At time of purchase, order must contain:
   - Upgrade or migration software subscription (1-year or 3-year)
2. Microsoft Sequel (SQL) software versions excluded.
3. Turnkey machines excluded.
4. Valid for existing Metasys customers only.
5. Current Metasys revision and existing SW serial numbers required.
