Critical Environments Advisor

The new standard for easy, accurate compliance reporting

One simple dashboard. Multiple bottom-line benefits.

Automate compliance reporting for operating rooms, labs, pharma freezers and other critical spaces. OpenBlue Critical Environments Advisor integrates easy-to-use digital tools with your current building systems to monitor temperature, pressure and humidity. Say goodbye to manual reporting hassles—and minimize costly downtime.

The power behind **your mission**

Save effort, time and money

Reduce the time and costs of staff reporting as much as 60-75%—and eliminate errors associated with manual data capture. Essential temperature, pressure and humidity metrics are clearly presented on the OpenBlue Critical Environments Advisor dashboard, streamlining inspections.

Auto-generate reports that meet requirements for The Joint Commission (TJC) and Centers for Medicare & Medicaid Services(CMS). And stay on top of regulatory change with automatic updates and enhancements.

Detect environment issues early

Identify trends in temperature, pressure and humidity, speeding up troubleshooting and repairs. OpenBlue Critical Environments Advisor delivers automatic notifications and presents data in context, enabling your team to view vital information quickly.

Minimize costly equipment downtime—and meet surgeon expectations for room conditions—helping to avoid delays due to OR temperature or other environment factors.

Enhance the value of your BAS

OpenBlue Critical Environments Advisor is compatible with Metasys as well as building automation systems from other providers. Our team works with you to leverage existing sensors and avoid duplication. BAS integration enables consistent, repeatable, accessible reporting. That helps your team determine when to change space conditions to maintain compliance.

OpenBlue technology makes it easy

Sensor technology and OpenBlue digital tools capture data more frequently to meet your facility needs. A basic gateway connects your BAS to cloud analytics and secure data storage. Nursing and laboratory directors can simply log in to track parameters on the user-friendly dashboard.

Scale OpenBlue Critical Environments Advisor to multiple locations, for consistent, accurate reporting. The annual subscription simplifies budgeting, while opportunities for process improvements and resource optimization boost your bottom line.

Free staff to focus on patient care

Automate critical environment data gathering and compliance reporting, enabling staff to focus on your core mission. Enhance patient care as you promote compliance, and gain the potential for higher reimbursements through improved HCAHPS scores.

Let us show you how OpenBlue Critical Environments Advisor can increase compliance reporting ease and accuracy while minimizing downtime for your facility. Contact your Johnson Controls representative today.
