

Flexible buildings to meet a range of challenges

Reimagine your spaces to boost health, safety and efficiency

Building owners and operators have identified a need that will remain relevant long beyond the COVID-19 pandemic. It's that facilities must be able to serve multiple, unanticipated purposes, whether it's responding overnight to an emergency or adapting over time to accommodate changing occupancy and operating requirements.

Johnson Controls can help you rethink how space is used, with an emphasis on health and safety. We start with a flexibility assessment to clarify your needs. From there we help you evaluate options for funding and financing, including grants, relief funds and incentives.

Partner with us to manage budgets and risk

Together we determine which technology and service solutions make sense for your facility, operating style and budget. These solutions can be procured under an outcome-based model, helping you reduce capital outlays and manage risk with guaranteed performance.

Our three-pronged approach includes:

- **Rapid renovation:** Streamline procurement to make turnkey improvements to safety, efficiency and resilience
- **Ongoing optimization:** Use flexible building controls to make the most of everyday and emergency operating modes
- **Remote services:** Monitor and maintain health and safety compliance as well as operational efficiency and reliability

Raising efficiency – reducing costs

Modernizing critical building systems empowers you to adapt to changing occupancy and space use. What's more, you reduce facility energy and operational costs, and improve financial performance through expanded revenue opportunities.

Backed by OpenBlue – the blueprint of the future

OpenBlue Healthy Buildings supports dynamic facilities with smart connected solutions for healthy people, healthy places, and a healthy planet. Our approach incorporates a combination of hardware and software as well as a mobile application to manage spaces and occupant experiences.

The power behind **your mission**

Assess and progress

Our experts assess your facilities to identify opportunities for improvement in these key areas.

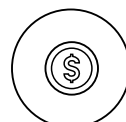

Flexibility

Change spaces quickly and easily to serve multiple uses

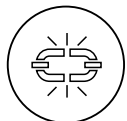

Life safety

Boost protection of people and assets

CapEx management

Make full use of relief funds and other financing

Resilience

Recover quickly from storms, outages and other incidents

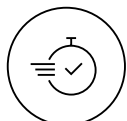

Air quality

Deliver clean air for a healthy indoor environment

Digital technology

Connect, automate and integrate to reach your goals

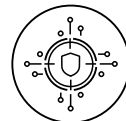

Efficiency

Optimize building, asset and operations performance

Emergency response

Pivot swiftly in case of disaster

Cybersecurity

Help prevent damaging breaches of building systems and data

Let's talk about how we can help you.
